AHMED ALAAELDIN ATIA

Senior Mobile Engineer (Flutter | Android)

Saudi Arabia | +966 50 850 9042 (KSA) | +20 109 679 6900 (Egypt) | ahmedalaagenina@gmail.com | LinkedIn | GitHub | Portfolio | MyLinks

PROFESSIONAL SUMMARY

Senior Mobile Engineer with ~6 years of experience and 20+ production apps shipped across logistics, healthcare, education, e-commerce and government. Expert in Flutter, Android and Clean Architecture, with deep experience in offline-first systems, real-time maps, secure payment flows and multi-role platforms. Leads technical decisions from concept to App Store / Google Play release, and authors open-source packages on pub.dev.

PROFESSIONAL EXPERIENCE

Senior Mobile Engineer | iDara.NET

Feb 2026 – Present | Saudi Arabia

iDara Sign — iOS | Android | Web | Admin *(E-Signature Platform)*

- Leading architecture and development of a multi-role document workflow system spanning mobile (iOS/Android) and Flutter Web, using Clean Architecture, BLoC, GoRouter, and GetIt.
- Engineered an offline-first caching architecture (Dio interceptor + Hive) with read/write request splitting and optimistic local execution, serving reads cache-first to cut redundant network calls.
- Designed a cross-app duplicate-request prevention system (custom interceptor + BLoC-level guard) across 2 apps, eliminating duplicate-submission incidents caused by repeated taps and network retries.
- Built a continuous PDF signing experience (pdfrx) with draggable signature-field placement across multi-page documents, resolving coordinate-accuracy, overlay-lifecycle, and cross-page gesture-crash issues, eliminating the crashes reported in the signing flow.
- Designed deep linking and App/Web fallback strategies for seamless cross-platform sign-in and document-signing journeys.
- Owned the release lifecycle for iDara Sign end-to-end - from code review through App Store and Google Play submission, managing privacy labels, OTP review requirements, and deep-link configuration - shipping both platforms through multiple review cycles.

iDara Tracking — iOS | Android *(Real-Time Fleet Tracking Platform)*

- Rebuilt the legacy native Android fleet-tracking app in Flutter as sole developer (Clean Architecture, BLoC, GetIt/Injectable), integrating a third-party GPSWOX backend with no staging environment and no server-side control; shipped v2.0 to both stores.
- Engineered a real-time fleet map scaling to 2,000+ vehicles per fleet using client-side marker clustering, cached marker bitmaps, animated marker interpolation between polls, and adaptive frame throttling to keep the UI smooth.
- Built per-vehicle history playback with route segments, trip summaries, and date-range filtering, plus live events, push notifications, and fleet search/filtering.
- Designed per-endpoint caching and retry policies (Dio + Hive), enforcing at-most-once delivery for safety-critical vehicle commands (e.g. remote engine cut-off) so a delayed retry can never override a newer command.

iDara Trip — iOS | Android *(Trip Management Platform)*

- Architected a multi-role trip management system using modular MVVM and Provider, establishing scalable engineering standards for vehicle workflows.
- Engineered mission-critical features including session persistence, auto-recovery flows, and role-based navigation for cross-platform reliability.

Software Engineer | Cyshield

Jan 2025 – Feb 2026 | Egypt

HR App Management Platform — iOS | Android

- Architected a modular HR platform supporting ticketing, RFC, reservations, attendance, and additional workflow modules.
- Led migration of ~80% of legacy modules to Clean Architecture, separating data, domain, and presentation layers for testability and maintainability.
- Conducted code reviews, ensuring architectural consistency across the mobile team.

Software Engineer | Aramex International

Oct 2022 – Jan 2025 | Egypt

Aramex Champion App — iOS | Android *(Courier Operations)*

Aramex Freight App — iOS | Android *(Truck Management)*

- Architected an offline-first synchronization engine with a persistent action queue and automatic sync on reconnect, letting couriers keep working in zero-connectivity zones without losing data.
- Bridged native Driver SDKs (Kotlin/Swift) into Flutter via Platform Channels, enabling advanced telematics and real-time mapping for 10K+ daily activities.
- Optimized location polling and background sync logic to reduce battery drain during long courier shifts.
- Engineered secure multi-payment workflows and real-time notification systems, streamlining high-concurrency courier and freight management operations.

Software Engineering Team Lead | Sanad Rewards *(Part-Time)*

Dec 2022 – Present | Egypt

Sanad Rewards — iOS | Android *(Gamified Health & Rewards Platform)*

- Leading a cross-functional team (Mobile, Backend, UI/UX), driving sprint execution.
- Architected HealthKit / Google Health Connect integrations with sensors and rewards logic.
- Mentoring engineers and aligning the technical roadmap with business strategy.

Sanad Business — iOS | Android *(Corporate Wellness Platform)*

- Contributed to a ground-up Flutter rewrite of the Sanad Rewards employee app with behavioral parity to the live app, delivering the challenge-teams feature, HealthKit integration, and push-notification and flavor fixes.
- Owned release engineering: Android signing, build flavors, deep-link configuration, and Shorebird code push for over-the-air updates.

Pulse — iOS | Android *(Health Coaching & Programs App)*

- Established the app foundation (Clean Architecture, BLoC, GoRouter navigation shell) for Home, Profile, Program, and Inbox, and built the Program feature end-to-end plus FCM push notifications.

Senior Software Engineer | Alrazi *(Part-Time)*

Sep 2023 – Jan 2026 | Jordan

Stylee — iOS | Android | Web *(Fashion E-commerce Marketplace)*

- Built buying, renting, and listing features with secure payment integration.

Alrazi Education Platform — iOS | Android | Web

- Integrated a ChatGPT assistant, video streaming, TTS, and assessment systems.
- Built the complete backend using Firebase and Cloud Functions.

Flutter Developer | One Solution *(Full-Time; Part-Time from Oct 2022)*

Jan 2021 – Jun 2023 | Egypt

- Delivered 9+ production apps across health, e-commerce, education, booking, and government sectors, including Macro, Challenge Center, Light Options, Let's Diet, One Edu, Yabila Chalet, Al-Sibiya Station, and Makkah Region Development Authority platforms.
- Built features end-to-end: REST API integration, Firebase, Arabic/English localization, maps, push notifications and custom UI. Recognized as Employee of the Month (January 2022).

OPEN SOURCE & PERSONAL PROJECTS

- noon_payments (pub.dev) — Published and maintain a Flutter plugin for Noon Payments integration, wrapping the native Android and iOS SDKs, including Swift Package Manager support; managed the full pub.dev publishing lifecycle.

TECHNICAL SKILLS

- Mobile Development: Flutter, Dart, Android, Kotlin, Java, Jetpack Compose, iOS (Swift), Platform Channels
- Architecture & State Management: Clean Architecture, MVC, MVVM, BLoC, Provider, Riverpod, GetX, GoRouter, GetIt, SOLID
- Backend & Cloud: Firebase, Firestore, Cloud Functions, REST APIs, Authentication, FCM, Odoo RPC, Dio, Hive
- Engineering Practices: Git, CI/CD (GitHub Actions, Fastlane, Shorebird), Testing (Unit, Widget, Integration), Code Review, Performance Optimization
- Additional Skills: Localization, Maps, Payments, Sensors, HealthKit / Health Connect, NFC/QR, WebView, Custom UI Components

EDUCATION

- **Bachelor's Degree, Computer Science** (2016 – 2020)
  Faculty of Computer and Information Science (FCIS), Mansoura University
  Graduation Project: 3D Reconstruction Dressing Room on Mobile Phone — a virtual dressing room simulation on a mobile phone using a single camera, built with AI, ML, OpenSfM, Image Processing, and Flutter.
- **Android Mobile Development** | Information Technology Institute (ITI) (Oct 2020 – Feb 2021)
  Ministry of Communications and Information Technology

CERTIFICATIONS

- Flutter Mobile Development | Information Technology Institute (ITI)
- Clean Architecture & Testing Masterclass | Udemy
- Advanced Flutter State Management (BLoC) | Udemy
- Android Development | New Horizons

LANGUAGES

- Arabic (Native)
- English (Professional)
